

Dealership Insurance & Asset Protection

Agri-Inputs & Farm Supply

Document type: Plan / SOP / strategy / guide · Generated 14 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Produces an insurance plan for an agri-input dealership — covering stock, fire/flood, godown, transit, liability and key risks — so a single event does not wipe out the business. Use it to protect assets. For broader risk use the Business Risk Management tool.

Purpose of this tool & output

Insure stock, godown and business risks

How the output is used

Use it to insure stock, godown and business risks — fire, theft, transit and liability cover sized to your stock value and the agrochemical hazard.

Important cautions

One fire or flood in a godown holding flammable agrochemicals plus peak stock can wipe out a season — insure at peak-stock value (under-insurance cripples claims) and declare hazardous storage correctly. Insurance complements, not replaces, safe storage. Confirm covers, exclusions and sums insured with a licensed insurer.
