

Expiry & Shelf-Life Management

Agri-Inputs & Farm Supply

Document type: Plan / SOP / strategy / guide · Generated 14 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Produces an expiry-management plan — tracking batch/expiry, FEFO rotation, near-expiry liquidation, company return norms, and legal risk of selling expired inputs. Use it to cut expiry losses and stay legal. For storage conditions use the Godown Setup Guide.

Purpose of this tool & output

Stop losses from expired seed and pesticides

How the output is used

Use it to stop losses from expired seed and pesticides — a first-expiry-first-out system, ageing checks and timely return or clearance of near-expiry stock.

Important cautions

Selling expired seed, fertilizer or pesticide is an offence and dangerous. Track expiry, rotate FEFO, and liquidate or return near-expiry stock before the date — never sell past it. Negotiate return/replacement terms with companies upfront.
