

Multi-Licence Inspection Readiness

Agri-Inputs & Farm Supply

Document type: Licence / statutory filing · Generated 13 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Produces a combined inspection-readiness self-audit across all your licences — seed, fertilizer/FCO, pesticide/Insecticides Act — covering licences, source docs, registers, stock, display and storage. Use it to pass any inspection. For the fertilizer/DBT-specific version use the Fertilizer Inspection Readiness tool (AI7).

Purpose of this tool & output

Be ready for any agriculture-dept inspection

How the output is used

Use it to be ready for any agriculture-department inspection across your seed, FCO and pesticide licences — one combined checklist of the licences, records and storage inspectors check.

Who receives it

Inspections are conducted by the notified inspectors of the State Agriculture Department under the Seeds Act, FCO and Insecticides Act, whether jointly or separately.

How to submit / file it

Keep all three licences, source and principal certificates, stock and sales registers, PoS/iFMS records and safe-storage in order; produce them on the inspection visit and reply to any observation in writing within the given time.

Fees & charges

No fee for the inspection; non-compliance can lead to penalties, stock seizure or suspension of the relevant licence.

Who should vet it

A local agri-licensing consultant, to run a mock multi-licence audit of your records and storage before inspectors arrive.

Important cautions

A periodic self-audit across all three licences is the best inspection insurance — the common failures are incomplete pesticide/seed registers, banned/expired stock, stock-register/PoS mismatches and missing source certificates. Keep records current and stock clean. Confirm exact requirements with the department.
