

# Input Mix & Model Selector

Agri-Inputs & Farm Supply

Document type: Plan / SOP / strategy / guide · Generated 27 Aug 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

## Background

Compares agri-input business models — seed-led, fertilizer-led, pesticide-led, full-range, or organic/specialty — on margin, licensing, working capital, credit exposure and risk, and recommends the fit. Use it to choose direction. For setup use the Dealership Setup Guide.

## Purpose of this tool & output

Choose which inputs and model to focus on

## How the output is used

Use it to decide which inputs and which sales model to focus on before you invest — match the mix to your catchment, capital and licence eligibility.

## Important cautions

Fertilizer is high-volume thin-margin with DBT/subsidy control; pesticide and seed give better margins but carry strict licensing and quality/safety liability. Match the model to your capital, qualification and credit appetite. Confirm licence needs for the chosen inputs.
