

Soil Testing Service Setup

Agri-Inputs & Farm Supply

Document type: Plan / SOP / strategy / guide · Generated 13 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Produces a plan to offer a soil-testing service — mini-lab vs tie-up, tests offered, pricing, linking results to balanced-nutrition sales, and soil-health-card alignment. Use it to add a service that drives fertilizer sales. For the fertilizer range use the Fertilizer Range Planner.

Purpose of this tool & output

Add a soil-testing service to the shop

How the output is used

Use it to add a soil-testing service to the shop — the kit or tie-up, sampling process and how to turn results into balanced-fertilizer sales.

Important cautions

A soil-testing service works best when results translate into honest balanced-nutrition recommendations — that helps farmers and pulls fertilizer/micronutrient sales. Ensure test quality/accuracy (a kit is basic; a lab or accredited tie-up is more reliable). Align with soil-health-card guidance.
