

Inward Transport & Freight Management

Building Materials & Hardware

Document type: Plan / SOP / strategy / guide · Generated 16 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a plan to manage inward freight on heavy materials — company-delivered vs self-lifted, freight negotiation and per-unit costing, e-way and weight verification, and demurrage/detention control — so inbound logistics cost is minimised and verified. Use it to control inbound freight. For outbound delivery use the Delivery & Logistics SOP.

Purpose of this tool & output

Control the freight on heavy inbound loads

How the output is used

Use it to control the freight on heavy inbound loads — the transport, loading and route decisions that keep landed cost down.

Important cautions

Verify weight/quantity on arrival and claim shortages immediately; unverified inbound loads and unclaimed shortages erode margin silently.
