

Farm Biosecurity Plan

Dairy, Poultry & Livestock

Document type: Plan / SOP / strategy / guide · Generated 13 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a farm biosecurity plan — controlling entry (people/vehicles/animals), quarantine of new/sick animals, hygiene and disinfection, pest/bird control, and disposal of dead animals — so infectious disease is kept out (critical for poultry and dairy). Use it to prevent outbreaks. For disease response use the Common Disease Management tool.

Purpose of this tool & output

Keep disease out of your farm

How the output is used

Use it to keep disease out of your farm — entry control, hygiene, quarantine and the biosecurity practices that stop outbreaks.

Important cautions

Biosecurity is the cheapest disease prevention — especially for poultry (bird flu/Newcastle can wipe out a flock); control entry, quarantine new/sick animals, disinfect, and dispose of dead animals safely. Report bird flu/notifiable disease immediately.
