This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Calculates the break-even milk/egg/meat price and output for your farm from fixed and variable costs, and shows the safety margin. Use it to set targets and test price shocks. For full profit use the Farm P&L Modeller.

Purpose of this tool & output

Find the yield and price you must hit

How the output is used

Use it to find the yield and price you must hit — the break-even that tells you when the farm covers its costs.

Who should vet it

Your CA or accountant, to confirm the fixed costs and per-litre economics used in the break-even.

Important cautions

Break-even shifts with feed cost and price — both volatile in livestock. Keep a safety margin above break-even and re-run when feed or milk prices move.
