

Deworming & Parasite Control

Dairy, Poultry & Livestock

Document type: Plan / SOP / strategy / guide · Generated 15 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a deworming and parasite-control plan — internal deworming schedule, external parasite (tick/lice/mite) control and tick-borne disease prevention, and pasture/hygiene management — so parasites do not silently drain animal health, growth and milk. Use it to control parasites. For the calendar use the Vaccination & Health Calendar tool.

Purpose of this tool & output

Control the parasites that sap productivity

How the output is used

Use it to control the parasites that sap productivity — a deworming and parasite-control schedule for internal and external parasites.

Important cautions

Parasites silently drain growth, milk and immunity (and ticks spread deadly tick-fever); deworm on schedule (rotate dewormers to avoid resistance) and control ticks. Consult your vet for the right products, dosing and milk-withdrawal.
