

Herd Fertility & Reproduction Manager

Dairy, Poultry & Livestock

Document type: Plan / SOP / strategy / guide · Generated 15 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Produces a fertility-improvement plan — diagnose poor conception and long calving intervals, heat-detection, nutrition-fertility links, timing and vet protocols. Use it to keep cows breeding on schedule (fertility drives dairy profit). For a single breeding decision use the Breeding & AI tool (D2).

Purpose of this tool & output

Cut calving interval and improve conception

How the output is used

Use it to cut calving interval and improve conception — the heat detection, timing and health that raise reproductive efficiency.

Important cautions

Fertility is a major profit lever — every extra day open costs money. Many causes (heat detection, AI timing, body condition, infection) are fixable. Have a vet examine repeat/anoestrus breeders; correct nutrition around calving.
