

# Green Fodder Cultivation Plan

Dairy, Poultry & Livestock

Document type: Plan / SOP / strategy / guide · Generated 16 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

## Background

Builds a green-fodder cultivation plan — fodder crop selection (maize, napier, berseem, lucerne) for your land/season, a year-round cropping calendar, and yield/area planning to feed your herd — so you cut feed cost (the biggest expense) with cheap quality fodder. Use it to plan fodder. For preservation use the Silage & Hay Making tool.

## Purpose of this tool & output

Grow cheap, quality fodder year-round

## How the output is used

Use it to grow cheap, quality fodder year-round — the fodder crops and calendar that cut your biggest cost.

## Important cautions

Growing your own green fodder (a cereal+legume mix, year-round via a cropping calendar and perennials like napier) is the biggest feed-cost lever; plan the area to your herd need and avoid lean-season shortages. Silage bridges the gaps.
