

Integrated Farming Model Planner

Dairy, Poultry & Livestock

Document type: Plan / SOP / strategy / guide · Generated 15 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Plans an integrated livestock farming model — combining dairy/poultry with fodder cultivation, biogas from dung, vermicompost/manure sales, and crop-livestock cycles — so you cut costs, add income streams and improve sustainability. Use it to design an integrated farm. For diversification use the Growth & Diversification Strategy tool.

Purpose of this tool & output

Combine dairy, fodder, biogas and more

How the output is used

Use it to combine dairy, fodder, biogas and more into one integrated model — so each activity feeds the next and lifts total income.

Important cautions

Growing your own fodder is the biggest cost lever (feed is 60-70% of dairy cost), and biogas + manure monetise dung; integration improves economics and sustainability. Match to your land and labour.
