Livestock Insurance Guide

Dairy, Poultry & Livestock

Document type: Plan / SOP / strategy / guide · Generated 27 Aug 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Explains livestock insurance — what it covers (death from disease/accident), the process (tagging, valuation, premium, government subsidy), claim requirements, and whether it is worth it — so an animal death does not become a devastating loss. Use it to protect the herd. For subsidies use the Subsidy & Scheme Advisor tool.

Purpose of this tool & output

Protect against the loss of an animal

How the output is used

Use it to protect against the loss of an animal — the livestock-insurance cover, sum insured and claim process worth taking for high-value animals.

Important cautions

For high-value animals or a small herd, one animal death is a major loss that insurance cushions; understand tagging/valuation and claim documentation (post-mortem, tag return) upfront. Government-subsidised livestock-insurance schemes exist — confirm current terms.

Companion documents
