

Milk Fat & SNF Improvement

Dairy, Poultry & Livestock

Document type: Plan / SOP / strategy / guide · Generated 14 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a plan to improve milk fat and SNF (solids-not-fat) — the components that set your price at fat/SNF-based procurement — through feeding (fibre, energy, bypass fat), breed, animal health and milking completeness, so you earn more per litre for the same volume. Use it when fat/SNF is low. For overall quality use the Clean Milk Production tool.

Purpose of this tool & output

Raise fat/SNF to earn a better price

How the output is used

Use it to raise fat and SNF to earn a better price — the feeding and management that improve the parameters your buyer pays for.

Important cautions

Fat and SNF set your price under component-based procurement — raising them earns more per litre for the same volume. Adequate fibre/roughage, balanced energy, animal health and complete milking are the honest levers; never adulterate.
