

Milk Yield Improvement Plan

Dairy, Poultry & Livestock

Document type: Plan / SOP / strategy / guide · Generated 14 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a plan to raise milk yield per animal — covering feeding/nutrition, breeding/genetics, comfort and heat-stress, health/mastitis, and milking practice as the levers — and diagnoses which is your bottleneck, so you lift litres without simply buying more animals. Use it when yield is low. For a specific lever use the feeding, breeding or comfort tools.

Purpose of this tool & output

Lift litres per animal, the right way

How the output is used

Use it to lift litres per animal the right way — the combined feeding, health and comfort actions that raise yield sustainably.

Important cautions

Milk yield is a system — feeding, genetics, comfort/heat, health and milking practice all cap it; find and fix your biggest bottleneck rather than chasing one factor. Genetic potential sets the ceiling, but management decides how close you get.
