

# Poultry Biosecurity & Disease Control

Dairy, Poultry & Livestock

Document type: Plan / SOP / strategy / guide · Generated 15 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

## Background

Builds a poultry biosecurity and disease-control plan — farm access/isolation, all-in-all-out and cleaning between batches, vaccination schedule (Newcastle, Gumboro, others), rodent/wild-bird control, and bird-flu vigilance — because one disease outbreak can wipe out a flock. Use it to protect birds. For a vaccination-only view use the Vaccination Calendar tool.

## Purpose of this tool & output

Keep disease out of a vulnerable flock

## How the output is used

Use it to keep disease out of a vulnerable flock — the biosecurity and disease-control practices poultry demands.

## Important cautions

One disease outbreak can wipe out an entire flock — biosecurity (access control, all-in-all-out cleaning, vaccination, pest control) is far cheaper than an outbreak. Report suspected avian influenza (bird flu) to authorities immediately; consult a poultry vet for your vaccination schedule.
