

Farm Record-Keeping System

Dairy, Poultry & Livestock

Document type: Plan / SOP / strategy / guide · Generated 14 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Designs a farm record-keeping system — per-animal milk yield, feed, breeding/health events, and farm-level production, cost and income — so you manage by data (which animals profit, what to cull, cost control). Use it to build records. For financial analysis use the Farm P&L Modeller (via finance).

Purpose of this tool & output

Track animals, milk, feed, health and money

How the output is used

Use it to track animals, milk, feed, health and money — a record system that turns your farm from guesswork into decisions.

Important cautions

Per-animal records reveal which cows earn their feed and which to cull — a low-yielding cow eating the same feed loses money daily. Records turn a farm from guesswork into a managed business; keep them simple but consistent.
