

AERB Radiation Licence Guide

Diagnostics, Labs & Imaging

Document type: Licence / statutory filing · Generated 15 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Explains getting an AERB licence for X-ray, CT or other radiation equipment via eLORA — RSO, room shielding, QA, registration and licensing steps. Use it for imaging compliance. For the safety document use the Radiation Safety (QA/QC) Plan.

Purpose of this tool & output

License your X-ray or CT with AERB

How the output is used

Use it to license your X-ray or CT with AERB — the eRLMS registration, radiation-safety and layout approval for imaging equipment.

Who receives it

The licence/registration is granted by AERB (Atomic Energy Regulatory Board) through the eLORA / eRLMS platform for radiation-emitting equipment.

How to submit / file it

Register the equipment and institute on eLORA, submit the room layout, shielding, RSO and QA details, and obtain the licence before commissioning the X-ray or CT.

Fees & charges

AERB fees based on the equipment type; the licence is periodically renewed and tied to a qualified Radiation Safety Officer.

Who should vet it

AERB, which reviews the shielding, layout and safety, usually with a RSO and a qualified radiological safety expert supporting the application.

Important cautions

X-ray, CT and other radiation equipment cannot be operated without AERB approval and licensing via eLORA, proper shielding, personnel monitoring (TLD badges) and, where required, a qualified RSO. Engage an AERB-approved consultant for shielding design and follow current AERB requirements.
