

Imaging Report Templates

Diagnostics, Labs & Imaging

Document type: Plan / SOP / strategy / guide · Generated 15 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Creates structured imaging report templates — for common X-ray, ultrasound and CT studies — with technique, findings, impression and signatory blocks. Use it to standardise radiology reporting. For pathology reports use the Diagnostic Report Format & Templates tool.

Purpose of this tool & output

Structured templates for imaging reports

How the output is used

Use it to build structured templates for imaging reports — consistent, clear templates by modality and study type.

Important cautions

Imaging reports must be issued by a qualified radiologist and correlated clinically. Obstetric and other sex-detectable imaging must comply with PC-PNDT and must never record or communicate fetal sex. Templates are a starting structure — the radiologist owns the interpretation.
