

Teleradiology Setup Guide

Diagnostics, Labs & Imaging

Document type: Plan / SOP / strategy / guide · Generated 14 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Guides setting up teleradiology — connectivity, PACS integration, radiologist panel, TAT, quality and data security — to report imaging remotely. Use it to solve radiologist availability. For the contract use the Teleradiology Services Agreement.

Purpose of this tool & output

Report imaging remotely and reliably

How the output is used

Use it to report imaging remotely and reliably — the teleradiology setup, connectivity and reporting arrangement to extend radiologist reach.

Important cautions

Teleradiology solves radiologist availability but the reporting radiologist must be genuinely qualified and registered, and patient image data must be handled securely under privacy law. Ensure reliable connectivity and TAT and a clear liability and quality arrangement.
