

Energy-Efficiency (BEE Star) Advisory

Consumer Electronics & Appliances

Document type: Plan / SOP / strategy / guide · Generated 29 Aug 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Produces an energy-efficiency advisory for a customer — explaining BEE star ratings and running-cost/electricity-savings over the product life, so you can sell a higher-star (often higher-margin) product on total cost of ownership, not just purchase price. Use it as a selling/help tool. For product choice use the Product Selection Advisory.

Purpose of this tool & output

Sell on running cost, not just sticker price

How the output is used

Use it to sell on running cost, not just sticker price — a BEE-star advisory that helps customers value energy efficiency and lifts appliance sales.

Important cautions

Estimates depend on usage and electricity rate; a higher-star/inverter product often pays back its premium in electricity savings. Selling on running-cost/TCO helps customers and moves better-margin efficient products. Confirm actual star ratings and specs.
