

Serial / IMEI & Warranty Tracking

Consumer Electronics & Appliances

Document type: Plan / SOP / strategy / guide · Generated 14 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Designs a serial/IMEI and warranty tracking system — capturing serial at inward and sale, recording warranty start and period, and using it for returns/service/theft and brand claims — so every unit is traceable and warranty is verifiable. Use it to track units. For after-sales use the Warranty Handling SOP.

Purpose of this tool & output

Track every unit and its warranty

How the output is used

Use it to track every unit and its warranty — a serial/IMEI and warranty tracking system that speeds service and claims.

Important cautions

Recording serial/IMEI on the invoice with warranty details is essential for verifying warranty, handling returns/service, preventing return-fraud and making brand DOA/warranty claims; it also traces theft. Make it a billing-time habit.
