

Service Centre Setup

Consumer Electronics & Appliances

Document type: Plan / SOP / strategy / guide · Generated 29 Aug 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Produces a plan to set up a service/repair centre — space and workbench setup, tools and test equipment, spare-parts stock, technicians, multi-brand vs authorised, and pricing — so you build a service centre that is a margin line and customer-retention engine. Use it to start service. For authorised setup use the Authorised Service Centre (ASC) Setup tool.

Purpose of this tool & output

Set up a profitable repair/service centre

How the output is used

Use it to set up a profitable repair or service centre — the space, tools, technicians and workflow a service business needs.

Important cautions

A service centre is a margin line AND a retention/footfall engine that online sellers cannot match locally; set it up properly (tools, spares, skilled technicians) — poor service loses customers, good service builds a moat.
