

Stock Norms & Obsolescence Control

Consumer Electronics & Appliances

Document type: Plan / SOP / strategy / guide · Generated 16 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Sets stock norms and obsolescence controls — reorder levels by velocity, buying-depth limits on fast-changing categories, ageing tracking, and proactive clearance before value drops — so working capital is not trapped in obsolete models. Use it to right-size inventory. For clearing use the Model Mix & New-Launch Management tool.

Purpose of this tool & output

Avoid capital stuck in dead models

How the output is used

Use it to avoid capital stuck in dead models — stock norms and obsolescence control that keep cash moving, not sitting.

Important cautions

In electronics, over-buying a fast-changing model traps cash and creates obsolescence loss; buy shallow and reorder on fast categories, track ageing, and clear proactively before value and brand price-protection drop.
