

Turnaround Time & Job Tracking

Consumer Electronics & Appliances

Document type: Plan / SOP / strategy / guide · Generated 27 Aug 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a turnaround-time and job-tracking system — job status stages, TAT targets, parts-wait management, and proactive customer updates — so repairs are fast, status is visible, and where-is-my-product calls drop. Use it to speed service. For workflow use the Repair Job Workflow SOP.

Purpose of this tool & output

Repair fast and keep customers informed

How the output is used

Use it to repair fast and keep customers informed — turnaround-time and job-tracking that build trust and repeat service.

Important cautions

Slow, opaque repairs are a top service complaint; set TAT targets, manage parts-wait, and update customers proactively — fast transparent service turns the service centre into a retention asset, not a complaint source.
