

Antibiotic & Residue Compliance Guide

Fisheries & Aquaculture

Document type: Plan / SOP / strategy / guide · Generated 15 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Explains banned antibiotics and residue rules for Indian aquaculture — the prohibited list, why residues cause export rejection, withdrawal periods, records and alternatives. Use it to protect exports and stay legal.

Purpose of this tool & output

Stay within banned-substance and residue rules

How the output is used

Use it to stay within banned-substance and residue rules — an antibiotic and residue compliance guide critical for export acceptance.

Important cautions

Banned-substance lists and testing methods evolve and buyers may test to very low limits; a single residue detection can reject a consignment and blacklist a farm. Verify the current prohibited list with MPEDA and the EIA and use only labelled, approved inputs.
