

Biosecurity Audit

Fisheries & Aquaculture

Document type: Financial model / analysis · Generated 14 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Audits an existing farm against biosecurity best practice — water, seed, carriers, hygiene and records — scoring gaps and prioritising fixes. Use it to harden a running farm before the next crop.

Purpose of this tool & output

Score and close biosecurity gaps

How the output is used

Use it to score and close biosecurity gaps — a biosecurity audit that rates your farm defences and directs fixes.

Who should vet it

An aquaculture health consultant, to validate the biosecurity findings and corrective actions.

Important cautions

A structured self-audit from your inputs; on-site conditions and shared water sources may add risks not captured here. Prioritise the highest-impact fixes and get a specialist walkthrough after a disease crop.
