Export Pricing & Costing Tool

Fisheries & Aquaculture

Document type: Financial model / analysis · Generated 27 Aug 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds an export price and costing for a seafood consignment — raw material, processing, packing, freight, duties, finance and margin across Incoterms and currency. Use it to quote and protect margin.

Purpose of this tool & output

Price an export order profitably

How the output is used

Use it to price an export order profitably — an export pricing and costing tool that builds price from cost, Incoterms and margin.

Who should vet it

Your CA or an export finance adviser, to confirm the cost lines, Incoterms and margin before you quote an export order.

Important cautions

An indicative costing from your inputs; actual freight, duties, export benefits and FX move and yields vary. Verify current freight, benefit rates and FX and confirm the Incoterm scope before quoting a firm price.
