

Aquaculture Feasibility Study

Fisheries & Aquaculture

Document type: Financial model / analysis · Generated 27 Aug 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Assesses whether a specific aquaculture or fisheries venture is viable — site and water, demand, economics, risks and a go or no-go. Use it before investing in ponds, a vessel or a plant.

Purpose of this tool & output

Test if an aquaculture venture is viable

How the output is used

Use it to test if an aquaculture venture is viable — the survival, FCR, price and cost economics before you commit pond and capital.

Who should vet it

An experienced aqua-farmer and a CA, to sanity-check the survival, FCR and price assumptions before you invest.

Important cautions

A desk feasibility view from your inputs, not a guarantee; aquaculture outcomes hinge on survival, disease and price that vary crop to crop. Commission soil and water testing and a local expert survey before investing.
