

Feed Management Plan

Fisheries & Aquaculture

Document type: Plan / SOP / strategy / guide · Generated 27 Aug 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a feeding plan — feed type, feeding rate by body weight and stage, schedule, feed checks and FCR tracking — to grow stock efficiently. Use it to control the biggest cost on the farm.

Purpose of this tool & output

Feed right for growth and FCR

How the output is used

Use it to feed right for growth and FCR — a feed management plan across ration, timing and monitoring that controls the biggest cost.

Important cautions

Feeding rates are indicative and must be tuned to appetite, temperature, water quality and check-tray response; overfeeding fouls water and wastes money. Adjust daily by observation and log FCR.
