

Growth Monitoring & Sampling Plan

Fisheries & Aquaculture

Document type: Plan / SOP / strategy / guide · Generated 13 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a sampling and growth-monitoring plan — how to sample, estimate average weight, biomass and survival, and adjust feed — so you manage by data. Use it to know what is really in the pond.

Purpose of this tool & output

Track growth, biomass and survival

How the output is used

Use it to track growth, biomass and survival — a growth monitoring and sampling plan that guides feeding and harvest timing.

Important cautions

Sampling estimates carry error, especially for survival; combine sampling, feed-tray response and observation. Handle stock gently during sampling to avoid stress, and verify at harvest.
