

Fisheries Model Selector

Fisheries & Aquaculture

Document type: Plan / SOP / strategy / guide · Generated 14 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Compares fisheries and aquaculture models against your resources — farming versus capture versus processing, species and intensity — and recommends the best fit with reasons. Use it to decide before you commit.

Purpose of this tool & output

Choose the right fisheries model

How the output is used

Use it to choose the right fisheries model — freshwater, brackish, shrimp, marine capture, hatchery or processing against your capital and site.

Important cautions

Model fit depends on your water quality, site, market access and risk appetite; disease and price volatility can change outcomes sharply. Validate water, soil and market and consult a local fisheries expert before committing.
