

Export Residue Compliance Programme

Fisheries & Aquaculture

Document type: Plan / SOP / strategy / guide · Generated 16 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds an antibiotic and contaminant residue-control programme for exporters — farm-to-plant controls, testing, the National Residue Control Plan and corrective action — to prevent consignment rejection. Use it to safeguard export access.

Purpose of this tool & output

Meet residue limits for export markets

How the output is used

Use it to meet residue limits for export markets — an export residue compliance programme across approved inputs, testing and records.

Important cautions

Residue limits are very low and enforced by importing authorities; one detection can reject a consignment and trigger increased checks on all Indian exporters. Confirm current limits and methods with the EIA and accredited labs and test rigorously.
