

Shrimp Feed & FCR Plan

Fisheries & Aquaculture

Document type: Plan / SOP / strategy / guide · Generated 16 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a shrimp feeding plan — feed grade by stage, check-tray-based rate, blind-feeding early, and FCR tracking — to control the largest cost and protect water. Use it to feed a shrimp crop efficiently.

Purpose of this tool & output

Feed shrimp for growth and low FCR

How the output is used

Use it to feed shrimp for growth and low FCR — a shrimp feed and FCR plan across ration, feeding trays and adjustment.

Important cautions

Feed is the biggest cost and a key disease and water-quality driver; overfeeding is the common costly error. Tune strictly to check-tray response, temperature and health, and log FCR every crop.
