

Shrimp Pond Preparation SOP

Fisheries & Aquaculture

Document type: Plan / SOP / strategy / guide · Generated 28 Aug 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Produces a between-crops pond preparation SOP for shrimp — drying, sludge removal, disinfection, liming, filling and water conditioning — to break disease cycles and start clean. Use it before every stocking.

Purpose of this tool & output

Prepare a pond between crops

How the output is used

Use it to prepare a pond between crops — a shrimp pond preparation SOP across drying, liming, tilling and filling.

Important cautions

Rushed preparation, especially after a disease crop, carries pathogens into the next crop; drying and liming times matter. Do not shortcut preparation and follow CAA effluent rules when draining and disposing of sludge.
