

# Stocking Density & Plan

Fisheries & Aquaculture

Document type: Plan / SOP / strategy / guide · Generated 27 Aug 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

## Background

Recommends stocking density, seed quantity, size and timing for a pond and species — balanced against water, aeration and target size. Use it to plan how much seed to stock.

## Purpose of this tool & output

Plan stocking for a crop

## How the output is used

Use it to plan stocking for a crop — a stocking density and plan matched to species, pond and target size.

## Important cautions

Density recommendations assume your stated aeration and water; higher density needs more aeration and raises disease risk. Verify seed quality and start conservatively, adjusting with a local technician.
