

Pond Water Management SOP

Fisheries & Aquaculture

Document type: Plan / SOP / strategy / guide · Generated 15 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Produces a water-management SOP — exchange, liming, fertilisation, probiotics and bloom control across the crop — to keep ponds stable. Use it alongside the water-quality plan for day-to-day practice.

Purpose of this tool & output

Manage water exchange and pond health

How the output is used

Use it to manage water exchange and pond health — a pond water management SOP across exchange, bloom and bottom health.

Important cautions

Water management is site-specific and interacts with feeding and stocking; excessive exchange spreads disease and breaches effluent norms. Test regularly, minimise discharge and follow CAA effluent rules and local advice.
