

White Spot Biosecurity Protocol

Fisheries & Aquaculture

Document type: Plan / SOP / strategy / guide · Generated 15 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a white-spot-focused biosecurity protocol — seed screening, water and crab and carrier control, disinfection and early response — the single biggest shrimp-crop risk in India. Use it to reduce WSSV losses.

Purpose of this tool & output

Targeted defence against white spot

How the output is used

Use it for targeted defence against white spot — a white spot (WSSV) biosecurity protocol across carriers, screening and response.

Important cautions

White spot has no cure and spreads rapidly, especially with direct intake and carriers; biosecurity lowers but never removes the risk. Use screened seed and reservoirs and be ready to harvest early to salvage value.
