

Production Planning & Capacity

Furniture & Home Furnishings

Document type: Plan / SOP / strategy / guide · Generated 14 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a production-planning approach — capacity, scheduling, order sequencing, material readiness and bottlenecks — to hit delivery dates without overload. Use it to run production to plan. For the workflow use the Production Workflow SOP.

Purpose of this tool & output

Plan production to meet orders on time

How the output is used

Use it to plan production to meet orders on time — a production planning and capacity approach that avoids delays and idle time.

Important cautions

Furniture delivery delays usually come from finishing and curing bottlenecks, material or hardware shortages and over-promising — plan capacity by stage, ensure material readiness, and commit realistic dates. Custom orders add variability; buffer for it. Validate capacity assumptions against actual output.
