

Studio Burn & Runway Planner

Gaming, Esports & Digital Entertainment

Document type: Financial model / analysis · Generated 15 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Calculates a gaming studio burn rate and runway from cash and net monthly burn, and models scenarios to extend runway to the next milestone/raise. Use it to manage cash to survival. For the full P&L use the Studio P&L Modeller.

Purpose of this tool & output

Track burn and extend runway

How the output is used

Use it to track burn and extend runway — how many months of runway you have and how to stretch it before the next raise.

Who should vet it

Your finance lead, to confirm the burn and cash-balance inputs before you plan on the runway.

Important cautions

Runway = cash / net burn — and you must reach your next milestone with a buffer to raise (investors expect months of margin). Start fundraising well before cash runs out. Cutting UA and slowing hiring extend runway fastest. Estimates from your inputs.
