Property-Tax Assessment / Objection / Revision

Document type: Financial model / analysis · Generated 28 Aug 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Computes and helps with municipal property tax — a fresh self-assessment, an objection to an inflated or wrong demand, or a revision after a change — with the computation on the applicable basis (annual rateable value, unit-area, or capital value), the exemptions and rebates, and the representation to the municipal body.

Purpose of this tool & output

Compute and contest municipal property tax — a new assessment, an objection to an inflated demand, or a revision with the computation

How the output is used

Use the computation on the applicable basis (annual rateable value, unit-area or capital value) and the exemptions/rebates to file a fresh self-assessment, an objection to an inflated demand, or a revision, with the representation to the municipal body.

Who should vet it

A property-tax consultant or a chartered accountant — to confirm the correct valuation basis, the exemptions/rebates and the objection grounds against the municipal demand.

Important cautions

The valuation basis and the rebates (self-occupied, senior-citizen, early-payment) differ by city, and an objection has a limited window from the demand; an under-declaration invites a penalty and re-assessment. Verify the current municipal basis and the objection timeline.

Companion documents
