

Product Costing Calculator

Pharma, Chemicals & Life Sciences

Document type: Financial model / analysis · Generated 15 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a product costing sheet for a formulation — API and excipients, packing, conversion, QC and overhead to a total cost per unit — with a margin and pricing note (DPCO awareness for scheduled drugs). Use this to cost a formulation accurately. Use actual rates and check DPCO for scheduled drugs.

Purpose of this tool & output

Cost a formulation accurately

How the output is used

Use the calculator to cost a formulation accurately — actives, excipients, packing, overheads and yield loss — before you price it.

Who should vet it

Your production and QC teams to confirm the yield, BOM and overhead assumptions before pricing.

Important cautions

AI-generated costing; use actual rates and check DPCO for scheduled drugs.
