

Photo Editing Workflow

Photography & Videography

Document type: Plan / SOP / strategy / guide · Generated 14 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a photo editing/culling workflow — ingest and backup, culling, batch editing with presets for consistency, retouching, and export/delivery specs — so editing is consistent, fast and does not become the delivery bottleneck. Use it to systematise editing. For outsourcing use the Outsourcing Editing Management tool.

Purpose of this tool & output

Edit consistently and fast, at scale

How the output is used

Use it to edit consistently and fast, at scale — a photo editing workflow that keeps a uniform look and quick turnaround.

Important cautions

Culling and batch editing with signature presets deliver both consistency and speed; editing is the top delivery bottleneck — a repeatable pipeline (and outsourcing overflow) is how you deliver on time. Always dual-backup before editing.
