

By-Product Utilisation Plan

Plantation & Commercial Crops

Document type: Plan / SOP / strategy / guide · Generated 14 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a plan to use estate and processing by-products — prunings, husk, pulp, shell, spent material — as compost, energy, or saleable products, cutting cost and adding value. Use it to turn residues into value.

Purpose of this tool & output

Monetise estate and processing residues

How the output is used

Use it to monetise estate and processing residues — a by-product utilisation plan that turns waste into extra income.

Important cautions

By-product routes need handling, some capital and steady volume and must manage effluent and pollution; on-farm recycling often gives the best return first. Confirm demand and compliance before investing in processing.
