

Plucking / Picking / Tapping SOP

Plantation & Commercial Crops

Document type: Plan / SOP / strategy / guide · Generated 15 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Produces an SOP for the core harvest operation — tea plucking, coffee picking or rubber tapping — covering standard, technique, quality, measurement and worker productivity. Use it to run a consistent, quality harvest.

Purpose of this tool & output

Standardise the harvest operation

How the output is used

Use it to standardise the harvest operation — a plucking, picking or tapping SOP that protects quality and the plant.

Important cautions

Harvest-operation standards are crop-specific and directly set final quality and grade; poor technique (over-plucking, unripe picking, bark injury) harms yield or the plant. Train and supervise to the standard and tie incentives to quality, not just quantity.
