AISEVAK.IN · FREE GUIDE

Replanting Economics Calculator

Plantation & Commercial Crops

Document type: Financial model / analysis · Generated 27 Aug 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Compares the economics of continuing an old low-yield block versus replanting — lost income during the new gestation against higher future yield and subsidy. Use it to decide whether and when to replant.

Purpose of this tool & output

Test the economics of replanting

How the output is used

Use it to test the economics of replanting — a replanting economics calculator on cost, lost yield and payback.

Who should vet it

Your CA or an agronomist, to confirm the cost, yield-loss and payback assumptions before you replant.

Important cautions

An indicative comparison from your inputs; outcomes depend on realised new yield, price over years and subsidy which are uncertain. Phase replanting to protect income and confirm subsidy with the board before deciding.
