

Personalised Job-Market Intelligence Report

Document type: Plan / SOP / strategy / guide · Generated 14 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Produces a personalised, India-specific job-market intelligence report for one target role in one city — the demand trend and what is driving it, indicative salary bands from fresher to senior (city-adjusted), the employers actually hiring, the must-have vs nice-to-have skills mapped against YOUR current skills to show your real strengths and gaps, the role's AI-displacement risk and how to stay AI-resilient, and a concrete 30-day action plan. It is an AI-generated briefing to orient your search and decisions — the figures are indicative estimates to verify against live listings, not a live data feed.

Purpose of this tool & output

A role × city briefing — demand, real salary bands, top employers, must-have skills, your skill gaps and AI-risk — built for your profile

How the output is used

Use the report to decide which roles and cities to target, to price yourself with the salary bands, and to close the exact skill gaps it flags before you apply. Pair the gaps with the Reskilling Roadmap and the shortlist with the Resume Tailoring tool, and walk into interviews knowing the market.

Important cautions

The demand trend, salary bands and employer lists are AI-generated indicative estimates from general market knowledge, not a live data feed — always cross-check against current openings on Naukri, LinkedIn, Indeed and company career pages before you decide or negotiate. Actual pay varies widely by company, skills and interview performance.

Companion documents

No related documents are listed on the portal for this tool.

This is AI-assisted guidance. Verify with a qualified professional before any binding decision. Fees, authorities and processes vary by state and change over time — confirm with your state authority.
