

Proof-of-Work Portfolio Builder

Document type: Plan / SOP / strategy / guide · Generated 15 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Gives you concrete, real projects to build that prove you can do the target role — the proof-of-work that beats a pile of certificates. Based on your role and current skills it suggests realistic projects, tells you exactly what each one proves and how to build it, where to host it (GitHub, Behance, a simple site, Google Drive), how to present it as a case study, and how to describe it honestly on your resume and LinkedIn. Build real work that is genuinely yours.

Purpose of this tool & output

Guided real projects that produce demonstrable proof for your target role — because a certificate is not a job

How the output is used

Use it to pick the starter project and begin today — build the projects for real, host each where it says (GitHub / Behance / a simple site), write them up as case studies, and add the honest resume and LinkedIn lines. Grow the portfolio over time as your skills improve.

Important cautions

Build real, original work that is genuinely yours — never present someone else's work as your own or fake a project; recruiters test it. A small set of real, well-documented projects beats a long list of claimed ones.
