

Drug Interaction & Safety Review

Pharmacy & Chemist Retail

Document type: Financial model / analysis · Generated 15 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Produces a structured safety review of a patient medication list — flagging potential drug-drug interactions, duplications, dosing concerns and cautions for the pharmacist to check and raise with the patient/doctor. Use it as a pharmacist screening aid. Not a substitute for clinical judgement or a doctor.

Purpose of this tool & output

Screen a patient prescription for safety issues

How the output is used

Use it to screen a patient prescription for safety issues — a drug interaction and safety review that flags risky combinations before dispensing.

Who should vet it

The registered pharmacist or prescriber, to confirm the flagged interactions before you dispense.

Important cautions

This is a general screening aid to prompt the pharmacist to verify against an authoritative drug-interaction reference and discuss concerns with the prescriber — it is NOT a definitive clinical determination or a substitute for the pharmacist professional judgement or the doctor decision. Do not change therapy on this alone; refer significant concerns to the prescriber.
