

Freight Rate Calculator

Transport & Fleet

Document type: Financial model / analysis · Generated 13 Oct 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Builds a freight rate for a lane from discrete cost lines — fuel, driver, tolls, maintenance, EMI/depreciation, empty-return and margin — expressed per trip, per km or per ton. Use it to quote goods rates. For a full go/no-go use the Route / Contract Feasibility Study.

Purpose of this tool & output

Set per-trip, per-km or per-ton freight from cost lines

How the output is used

Use it to set per-trip, per-km or per-ton freight from cost lines — a freight rate calculator that builds rate from real cost and margin.

Who should vet it

Your CA or finance lead, to confirm the cost lines and margin in the freight rate before you quote.

Important cautions

Confirm diesel, tolls and return-load reality for the lane before committing.
